

**Reflections**

**What do you feel were the important considerations when looking at the student data? How would this impact your approach to meeting student needs?**

**Think about your school/district's approach to the following:**

- Sharing student data (with students and parents)
- Using student data to plan for intervention and meet student needs

**What aspects of your current approach might you keep?**

**What aspects of your current approach might need to be changed, removed, etc. ? Why?**
